

**NEW**

Mixed 2 port wall brackets **prevoS1**

## Female threaded two port wall bracket 2 different couplings and drain

Discover our **10 new PrevoS1 combined wall fittings**, equipped with **two different one-push safety couplings** on its outlets (the push buttons may optionally be placed at offset angles).

Fitted on a secondary pipe, they offer **quick connections for two applications**.

The use of couplings that cannot be disassembled guarantees that the system remains **totally leaktight**.

These combined wall fittings offer **economic benefits** as they enable a **single downpipe to be installed for two applications**.

They offer a host of advantages in use:

- two couplings with different diameters can be used to supply air to **tools with different consumption levels**
- two couplings with different profiles on the same wall fitting **enable fluids to be differentiated**
- different air qualities (lubricated air and dry air) for tools and blowers **are not mixed**
- a pre-assembled, leaktight **manual drain** is built in under the wall fitting for condensate drain

### Installation

Prevost double wall fittings are connected to 20 mm and 25 mm ALR pipes via:

- straight metal pipe/thread connectors, *ref. ALR MM*
- union for wall fitting *ref. ALR JF* with a union/pipe coupling *ref. ALR UN* or *ALR MR*.
